

Module-1(Fundamental)

1. What is SDLC?

Ans: Software Development Life Cycle (SDLC) is a process used to develop software in steps like planning, design, Implementation, testing, Deployment, Maintenance.

2. What is software testing?

Ans: Software Testing is a process of used to identify correctness, completeness, and quality of developed computer software.

3. What is agile methodology?

Ans: Agile is a software development approach where work is done in small parts with continuous testing and feedback.

4. What is SRS?

Ans: SRS (Software Requirements Specification) is a document that describes all the requirements of a software system in detail.

5. What is oops?

Ans: OOPS (Object-Oriented Programming System) is a programming approach in which software is designed using class and object, similar to real-world entities.

6. Write in basic concept of oops?

Ans: The basic concept of OOPS are Encapsulation, Inheritance, Polymorphism, and Abstraction.

7. What is object?

Ans: An object is a real instance of a class that contains data and methods.

8. What is class?

Ans: A class is a blueprint or template used to create object.

9. What is Encapsulation?

Ans: Encapsulation is the process of wrapping data and methods into a single class.

10. What is Inheritance?

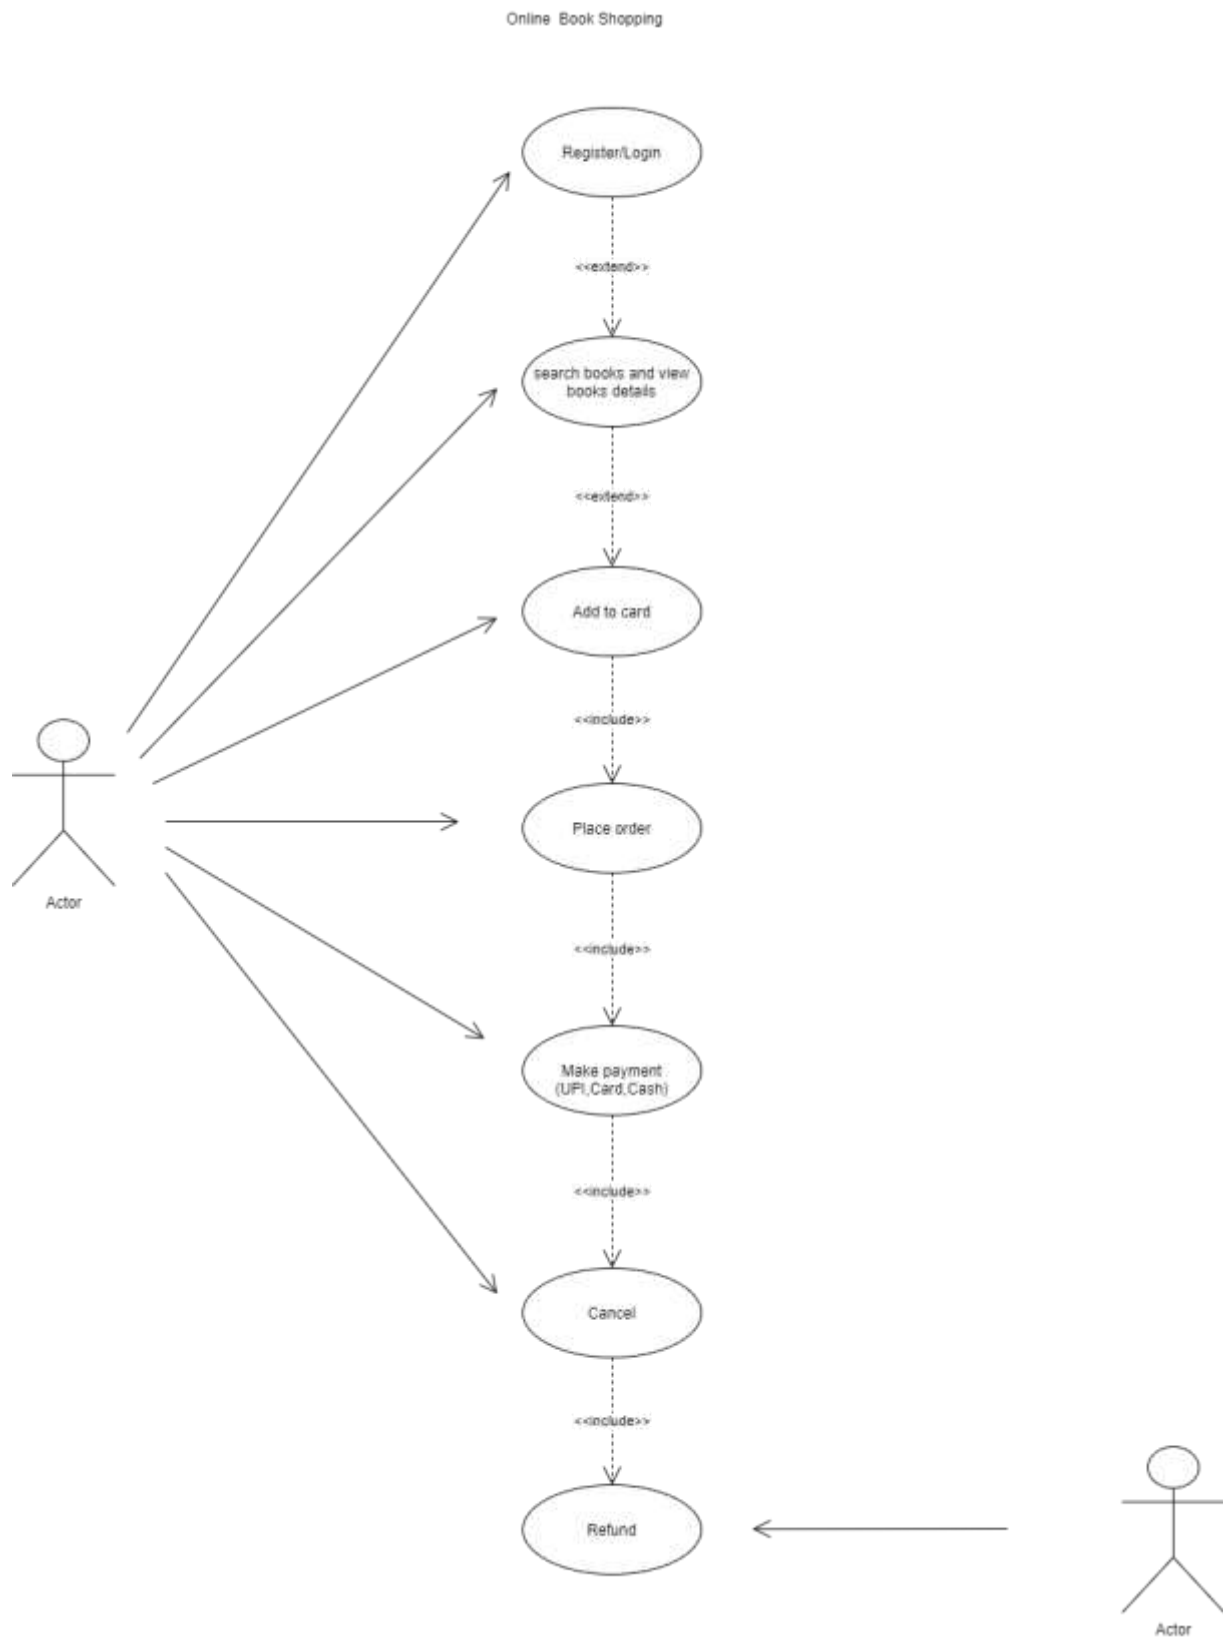

Ans: Inheritance is a concept where one class use the properties and methods of another class.

11. What is Polymorphism?

Ans: Polymorphism means “many form”, where one function or methods behaves different situations.

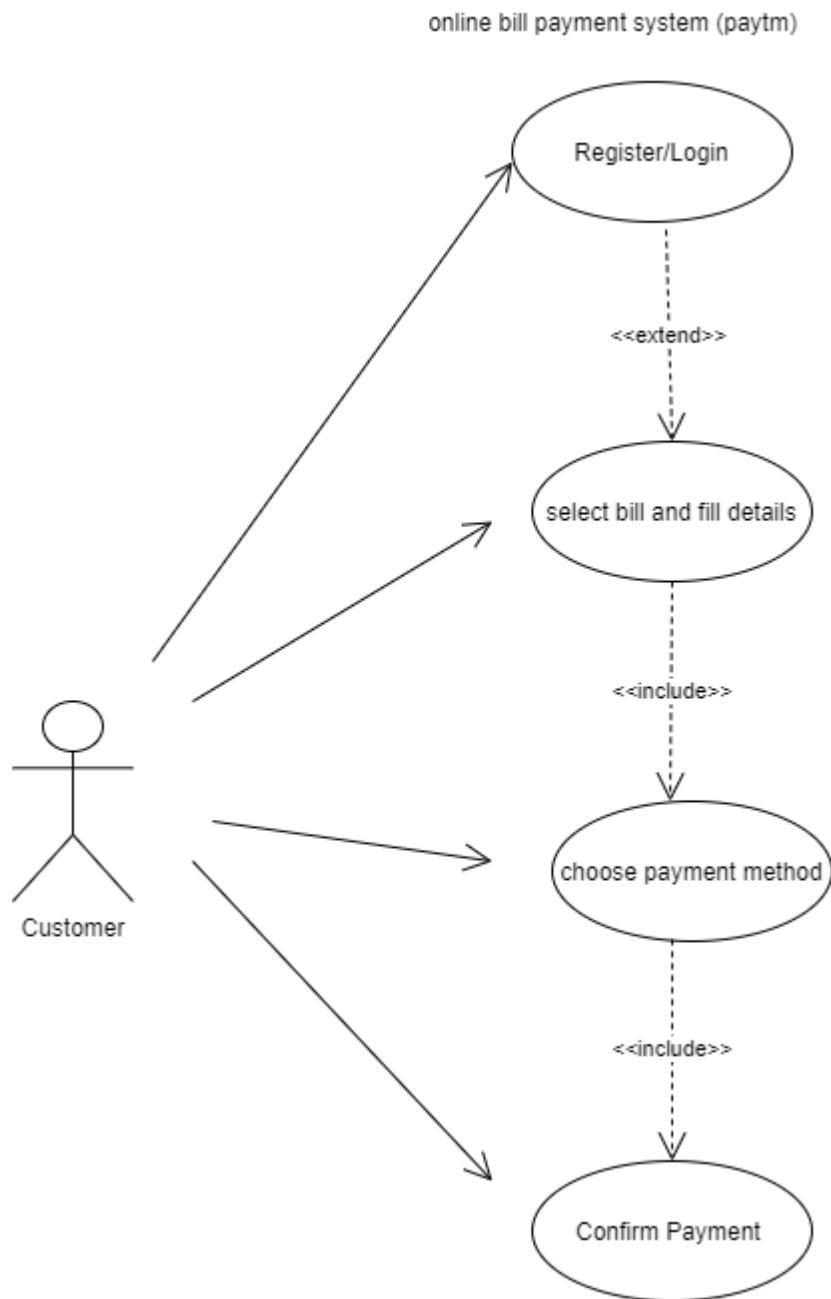

12. Draw Usecase on online book shopping.

Ans:

13. Draw Usecase on online bill payment system (paytm).

Ans:

14. Write SDLC phases with basic introduction?

Ans: Phases of SDLC (Software Development Life Cycle):

1. Requirement Collection: Collect and understand user requirements.
2. Designing: Create system design (structure, architecture).

3. Implementation: write a code.
4. Testing: Check the errors and fix bugs.
5. Deployment: Release the software to users.
6. Maintenance: Update and improve the software after release.

15. Explain Phases of the waterfall model?

Ans: Phases of Waterfall Model:

1. Requirement Collection: Gather all the user needs and requirements.
2. Analysis: Study and understand the requirements in detail.
3. Design: Plan system architecture and design.
4. Implementation: Develop the software by writing code.
5. Testing: Test the software and fix errors.
6. Maintenance: Maintain and update the software after delivery.

16. Write phases of spiral model?

Ans: The phases of spiral model are Planning, Risk Analysis, Engineering, and Evaluation.

17. Write agile manifesto principles?

Ans: Agile principles focus on customer satisfaction, working software, teamwork, and flexibility.

18. Explain working methodology of agile model and also write pros and cons?

Ans: Agile is an iterative approach where software is developed in small parts called sprints.

Work is divided into small tasks.

Advantages (pros):

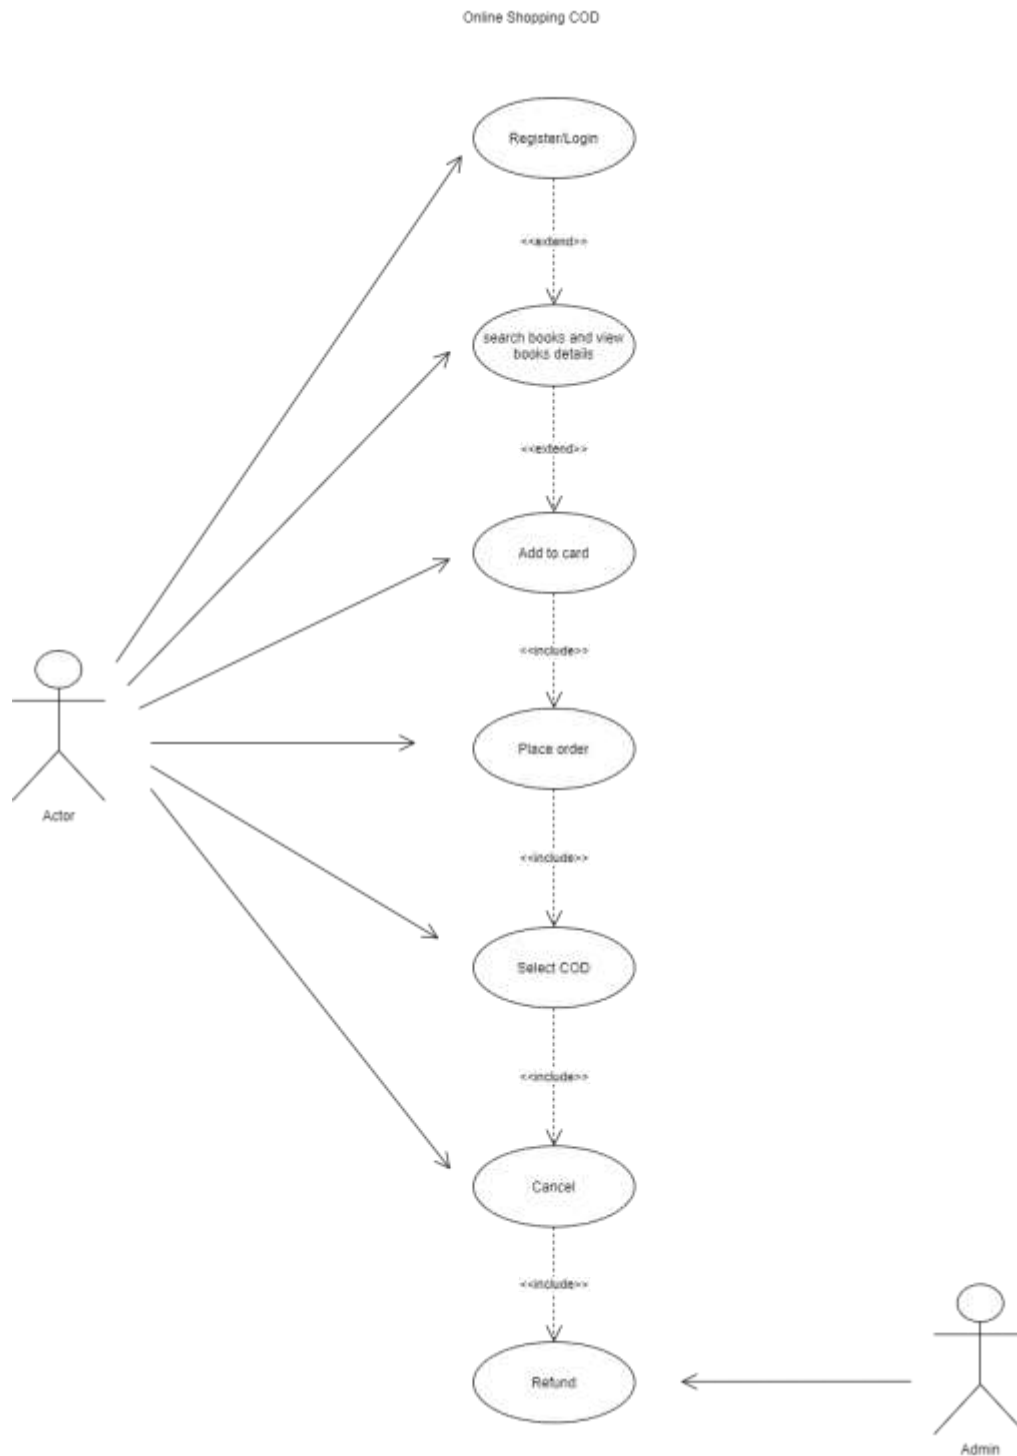

1. Fast problem detection.

Disadvantages (cons):

1. Less documentation.

19. Draw Usecase on Online shopping product using COD.

Ans:

20. Draw usecase on Online shopping using payment gateway.

Ans:
